

Protect your home against the damage
caused by water leaks and burst pipes

LeakSafe 

Choose the Leaksafe system that's right for you

At Leaksafe we know that every property is different and that everyone uses their home in a unique way, so we don't offer just one product to fit all, instead, we have developed a range of systems using wired, wireless and IoT technologies to ensure that our systems work with you to protect your home from the damage caused by leaks and bursts.

OPTION 1

WaterSwitch

Leak detection with automatic water shut off

OPTION 2

WaterTapp

APP based water on/off system with leak detection

OPTION 3

WaterComm

Leak detection and notification system

Option 1

WaterSwitch Leak detection with automatic shut off

Features

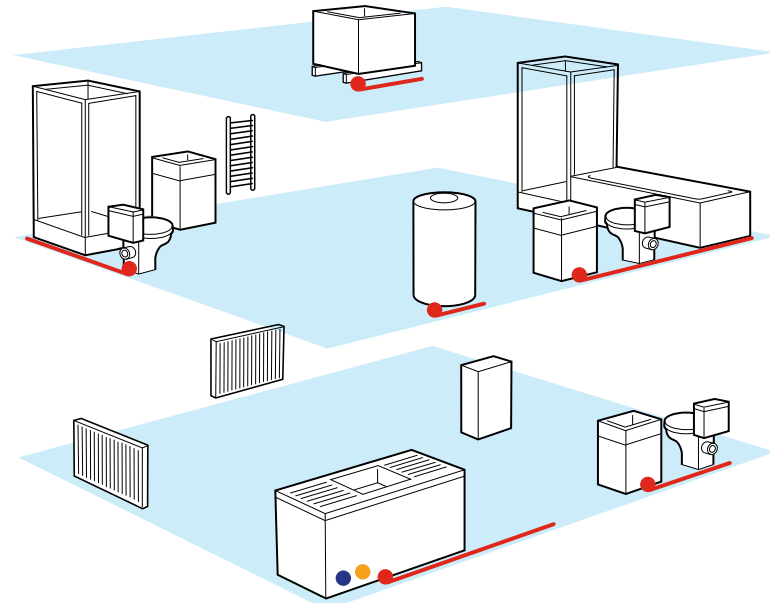

High quality WRAS approved shut off valve and Valve Control with leak detection tapes and wireless transmitters positioned discreetly in high risk areas such as kitchens, bathrooms and cylinder cupboards that will automatically shut the water off and alarm if the tapes get wet.

WaterSwitch is modular and can be tailored to any size of property.

Starting price for a property with 1 risk zone:
£350 + vat*, with 4 risk zones: **£650 + vat***

Applications

WaterSwitch can be installed in any property with incoming water pipe sizes between 15mm – 100mm.

- Shut off valve
- WaterSwitch Valve Control
- Wireless transmitter and leak detection tape

 [OPTION 3](#)

**Equipment price excluding installation + vat.*

Option 2

WaterTapp an APP based water on/off system with leak detection

Features

WaterTapp monitors water flow in a property to determine if there is a leak, when it will shut the water off and send a leak notification via the system APP. The system also monitors “no flow” for a user programmable time to determine if the property is vacant, when it will also shut the water off.

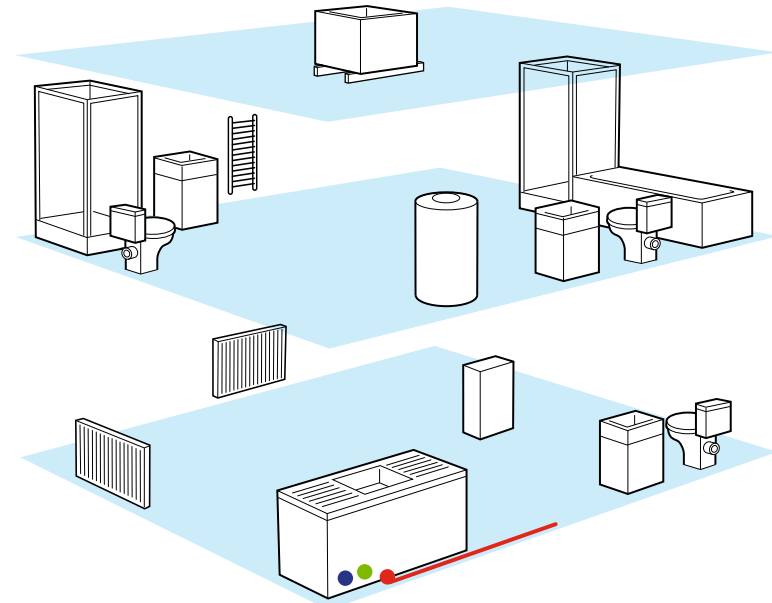

WaterTapp allows you to turn your incoming water supply on and off from the APP. You can check your water meter and water valve status remotely, and there is an option to connect 2 leak detection tapes that will shut the water off if they are in contact with water.

Starting price **£285** + vat*

Applications

WaterTapp can be installed in any property with incoming water pipe sizes between 15mm – 28mm. WaterTapp is ideal in second home and holiday let properties that rely on guests turning the water off when they leave.

OPTION 3

*Equipment price excluding installation + vat.

Option 3

WaterComm leak detection and notification system

Features

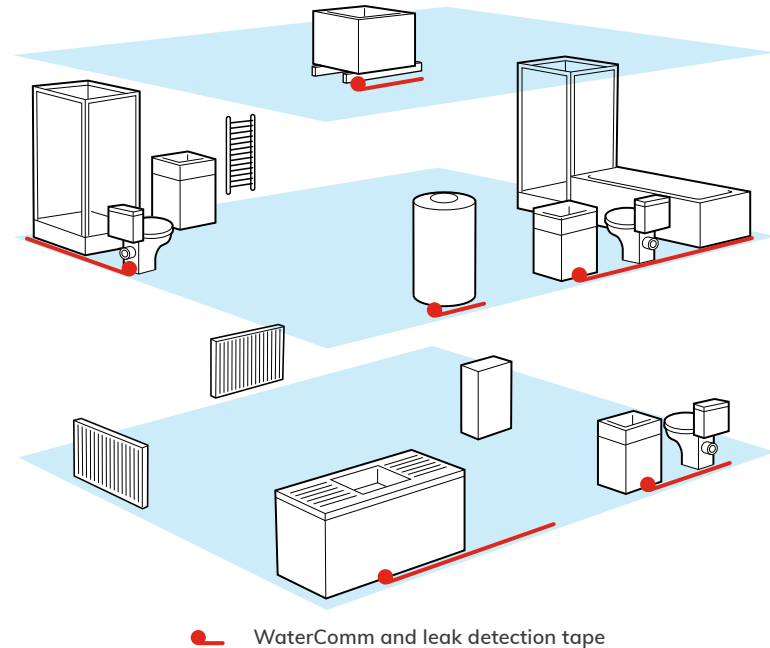

WaterComm monitors leak detection tapes positioned in high risk areas and will immediately send a SMS and / or email to users if a leak is detected, giving precise date, time and leak location information. WaterComm uses LPWAN or NB-IoT technology to transmit data that is more reliable and data secure than WiFi.

The system includes access to a Client Portal where you can check the status of every installed device.

Starting price **£105** + vat* for 1 risk zone

Applications

WaterComm can be installed in any residential or commercial property.

Survey and Installation Service

Survey Service

If you're not sure which system is best for you and your property or would like advice on where and how to position leak detection equipment, contact us about our nationwide Survey Service. One of our surveyors will visit, walk the property with you and discuss the best solution then compile a full report and quotation that you can share with your insurer if needed.

Installation Service

All Leaksafe systems can be installed by a competent tradesman, but if you would prefer an end-to-end service, we have a network of installers who we have trained, and who hold the requisite health & safety accreditations and insurances.
